WHO WE ARE

OBXtek is a mission-focused, relationship driven company providing high-quality solutions that last. We are a diversified professional services company and employ over 500 people on more than 35 contracts at job sites around the globe. Our teams are committed to identifying, developing, and delivering innovative, mission-focused technical and logistical solutions to our civilian and military partners in the federal government. Our capabilities include:

TRAINING & LOGISTICS

OBXtek employees provide technical knowledge, expertise, and training development services to the Army, Air Force, and National Guard. We support the training and readiness of specialized National Guard units providing domestic Chemical, Biological, Radiological, and Nuclear (CBRN) incident response capabilities. Collectively, these CBRN response units constitute the National Guard portion of the Department of Defense CBRN Response Enterprise (CRE). These National Guard CRE units have been providing mobile hospitals, testing sites, and vaccination sites supporting State and Federal government throughout the COVID-19 pandemic. Despite the impacts of COVID-19, our Subject Matter Experts (SMEs) continue to support the following:

- Catastrophic Incident Response (Natural and Man-Made Disasters)
- Defense Support of Civil Authorities (DSCA) Missions
- Domestic CBRN Preparedness and Response Training & Exercises

OBXtek SMEs provide extensive calculation and analysis of the training days lost by units across the Army National Guard (ARNG) due to COVID restrictions, thus determining the overall impact to unit readiness for the ARNG. Our employees provided detailed data regarding specific on-hand equipment quantities and locations at the onset of the ARNG COVID-19 response. They assisted with the prioritization and distribution of vital equipment with the greatest impacts, which included medical items that were in high demand with limited quantities. Key focus areas included:

- Distribution of Combat Cloth Face Coverings (CCFC) to Soldiers
- Distribution and Tracking of Ventilators
- Training Readiness Data reported to the Director, ARNG

RISK MANAGEMENT

OBXtek has a comprehensive understanding of the risk and mitigation strategies required for natural disasters, such as COVID-19. Our subject matter experts conduct training and exercise development across the nation with a specific focus on improving the processes and procedures for how the National Guard responds to disasters.

PROGRAM AND PROJECT MANAGEMENT

OBXtek's Program Management Office is fully staffed and available to provide the management support necessary to ensure uninterrupted operations. Program managers are the focal point of our organizational structure and the single point of contact for all contractual, staffing/recruiting, and performance needs.

- Agile Project Management
- Data and Decision Analytics
- Financial Management
- Earned Value Management Systems

CYBER AND TECHNOLOGY SOLUTIONS

OBXtek provides strategic cybersecurity support to safeguard critical infrastructure and protect vulnerable platforms to meet advanced mission needs. We develop and evaluate security programs, establish complex system-wide information security standards, integrate assessment and authorization processes and documentation into organizational business processes, manage risk through risk and vulnerability assessments, as well as scan and remediate malware intrusions.

- System Assessment and Authorization (A&A)
- Information Assurance/Cybersecurity Role-based Training
- Vulnerability Scanning, Intrusion and Malware Detection
- Cybersecurity Infrastructure Technical Support

OBXtek provided COVID-19 support across the Social Security Administration (SSA). When SSA transitioned to telework for the majority of workers, OBXtek technical staff established the procedure and supported onboarding of teams, users, and external vendors to use a Secure Remote Tool to connect and work on non-Virtual Private Network (VPN) accessible systems.

- Disability Determination Services
- Tier 3 Help Desk Support and Surge Support
- Security Incident and Event Management (SIEM) dashboards
- VPN Troubleshooting
- Network and Infrastructure Support

The Defense Language Institute Foreign Language Center (DLIFLC) met the challenge of an all-distance learning environment by adopting the Universal Curriculum and Assessment Tool (UCAT), developed by OBXtek, as DLIFLC's required method of assessment delivery. When the pandemic struck, DLIFLC was without a recommended method of delivering assessments to students remotely and struggled with this challenge. UCAT was selected over other Learning Management Systems because of its specific language learning focus, proven track record with DLI language schools, and capacity to respond to DLIFLC requirements.
